

Pterocarya rhoifolia KYOTO CONVENTION ('Bokravention')

Высота	15 m, fast growing
Ширина	10-12m
Крона	pyramidal, dark, dense crown
Кора и ветви	twigs brown, bark grey-brown, slightly grooved
Лист	imparipinnate with 11 - 19 leaf segments, 20 - 35 cm, leaf segments fresh green, elongated-oval, 6 - 12 cm, feathered leaf
Цветы	pendent and catkins, green, April/May
Плоды	winged nutlets in pendent racemes, 20 - 30 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile and moist
Мощение	устойчив к частичному мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Происхождение	Mart Brugel Tree Nursery BV, Oudembosch, the Netherlands, 1999
Синонимы	Pterocarya rhoifolia 'Kyoto Convention'

Unlike the round crowns of other species, *P. rhoifolia* naturally has a broad pyramidal crown shape. 'Kyoto Convention' has a narrower crown than the species and attains a height of approx. 15 m. The crown is dense and has a great mass of leaves so it captures a lot of CO₂. The older bark is only slightly grooved and *P. rhoifolia* has bud scales, which again is unlike other species. They are light grey and already drop off in late winter. The pinnate leaves are fresh green and consist of many leaf segments. The male and female flowers appear in pendent green catkins. They are followed by long racemes of small winged nutlets that start off green, turning brown later. Forms very few or no root suckers. Requires fertile, moist soil. Good tree for use in avenues, streets and industrial areas.
