

Pterocarya stenoptera 'Fern Leaf'

Высота	15 - 20 m
Ширина	15-20m
Крона	broad ovoid, dense, dark, dense crown
Кора и ветви	twigs dark greenish brown, bark grey, deeply grooved
Лист	imparipinnate, dark green, 20 - 45 cm, leaf segments, fern-like dissections, feathered leaf
Цветы	pendent catkins, green, ♀20 cm, ♂8 cm, May
Плоды	pendent fruit catkins, approx. 18 cm, winged nutlets
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile and moist
Влажность почвы	устойчив к влажным почвам
Мощение	устойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	moderate to good, cannot tolerate sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, многоствольное дерево

Large tree with a broad ovoid crown. Initially the tree grows quite slenderly, but the heavy boughs broaden the crown significantly when mature and it eventually spreads to 12 to 15 m wide. The twigs and bark are like the species but the leaves are very different. They are imparipinnate with 13 - 23 leaf segments. Each leaf segment is very deeply dissected giving the leaf its characteristic fern-like appearance. It often remains (dried) in the tree for a long time into autumn and early winter. The blossom and fruit are like those of the species. Forms root suckers only when the tree is in a bad condition. Resistant to long-lasting flooding. Cannot tolerate sea wind. A striking tree thanks to its lovely leaf structure.
