

Quercus ×hispanica 'Diversifolia'

Высота	5-8 m
Ширина	5-8m
Крона	flatened spherical, half-open crown
Кора и ветви	grey
Лист	evergreen
Цветы	light yellow, flowers in April
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, calcareous soil
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	7 (-17,7 до -12,3 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к ветру, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, разветвленное дерево

Semi-evergreen to full evergreen tree, 5 to 8 m tall, with a round to flat-topped spherical crown. The thick bark is dark grey, deeply grooved and highly corky. The ovate leaves have a very variable margin. A characteristic of this cultivar is that the leaves have a half-moon shaped dissection in the middle. There may be several small lobes above and below this dissection. Fruit is the same as the species. During severe cold, the leaves turn brown in the winter, only falling when the new leaves emerge. A healthy, warmth-loving tree which prefers a limy soil.
