Quercus ×schochiana

Высота	10 - 15 m
Ширина	10-15m
Крона	round, half-open crown
Кора и ветви	grey
Лист	green
Осенний окрас	желтый, оранжевый, красный
Цветы	golden-yellow, flowers in May
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, all soil types
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево

This hybrid between Q. palustris and Q. phellos grows into a medium-sized to large tree. The open crown is round and reaches a height of 10 to 15 m, sometimes slightly higher. The lanceolate leaves are very variably lobed. In the same tree, both entire leaves and lobed leaves can be present. The lobed leaves have 1 to 4 forward-pointing pointed lobes on each side. They are a glossy dark green. The approximately 1 cm large ovoid acorns are up to one third enclosed by the cup, which is covered with adjacent scales. This hybrid was first found in cultivation in Germany, at the end of the 19th century. Later, plants of this hybrid were also found in places where the natural range of both parent species overlapped. There are several hybrids of Q. palustris and Q. phellos in circulation.
