

Quercus ithaburensis

Высота	6 - 15 m
Ширина	6-15m
Крона	broad oval, half-open crown
Кора и ветви	dark greyish-brown, deeply grooved
Лист	elongated, oval or almost round, dull green, 6 - 12 cm
Цветы	pale yellow catkins, May
Плоды	elliptical to oval acorns
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	makes few demands, preferably not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	7 (-17,7 до -12,3 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к соли для улиц
Применение	промышленные зоны
Происхождение	the south-west of Asia

A rare semi-evergreen tree with a crown that starts off oval and is later broad oval. The old bark is dark greyish-brown and has remarkably deep grooves. The dull green leaves are sometimes elongated but can also be oval or practically round. They are usually heart-shaped at the base, giving them a characteristic violin-like shape. They are 6 - 12 cm long and the edge has a few pointed serrations. The acorns are remarkably large, approx. 4 cm in size. They are elliptical to oval and half (or even a little more) enclosed by the cupule: the latter is densely covered with remarkably woody, backward-bending scales. This distinguishes this species from the equally little known *Q. macrolepis* that has much softer and hairier scales on the cupule. *Q. ithaburensis* could be used more frequently because of its remarkable leaves and fruit.
