

Quercus libani

Высота	7 - 8 (10) m
Ширина	7-8m
Крона	broad ovoid, later rounded, dark, dense crown
Кора и ветви	grey, grooved, young twigs brown with white down, quickly become bare
Лист	elongated to lanceolate, sharp serrations, dark green, 5 - 10 cm
Цветы	golden-yellow catkins, May
Плоды	broad ovoid acorns, 2 - 2.5 cm, single or in pairs
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	makes few demands, preferably calcareous soils
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	Asia Minor and Syria

Ornamental oak occurring naturally in Asia Minor where it grows to approx. 10 m tall with a broad ovoid crown, later rounded. When cultivated it grows to approx. 7 - 8 m in height with dense branches and thin twigs. Young twigs are angular and covered with a white downy layer that soon disappears. The leaves are elongated to lanceolate, 5 - 10 cm long and 1.5 - 3 cm wide. The veins stand at an angle of 45° to the central vein and the leaf edge is sharply serrated. The upper side of the leaves is glossy dark green: the underside is lighter and sometimes covered with fine hairs. The acorns are two-thirds enclosed in the cupule. The cupule is covered by broad contiguous scales, narrower on the upper side. *Q. libani* is a very handsome park tree.
