

Quercus palustris 'Pendula'

Высота	20 m
Ширина	10-15m
Крона	round to broad weeping, half-open crown
Кора и ветви	twigs olive green, bark grey, smooth to shallow grooved
Лист	ovate to broad elliptical, roughly lobed, glossy dark green, 7 - 15 cm
Осенний окрас	красный
Цветы	golden coloured ♂ catkins, May
Плоды	flat-topped spherical, approx. 1 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any, preferably fertile, not too limy
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево

‘Pendula’ has a round to broad weeping, somewhat irregular crown because of the more drooping branches. Eventually the tree can grow to around 20 m tall and wide. Fairly open branched with olive green young twigs, older branches and bark grey and smooth to shallow grooved. The ovate to broad elliptical leaf is lobed to around halfway along the leaf blade. It is glossy dark green, turning red to reddish brown in autumn. An old cultivar that is still rare in culture. The drooping branches make it a typical park tree. Grows in almost any soil and can also cope with a moist soil. Can tolerate air pollution.
