

Quercus pyrenaica 'Pendula'

Высота	6 - 10 m
Ширина	5-9m
Крона	broad weeping, half-open crown
Кора и ветви	grey, grooved, thin pendulous twigs
Лист	obovate to elongated, green, 10 - 18 cm
Цветы	gold-coloured catkins, late June
Плоды	elongated ovoid acorns, in bundles of 2 to 5, Ø 1.5 - 2.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	calcareous, loamy sandy soils
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Netherlands, 1876

This weeping variety of *Q. pyrenaica* grows to be a broad tree with very pendulous branches. The crown is half-open. The thin twigs are grey and downy, later smooth and olive-green. The leaves vary in size: 10 - 18 cm long and 3.5 - 10 cm wide. They are covered with yellowish-green felt-like hairs on both sides. The underside remains hairy. The lobes are narrower than those of the species and mostly very deeply incised. The leaves are a somewhat paler green than those of the species. The elongated ovoid acorns are grouped in twos and fours and are half enclosed by the cupule: the latter is covered with long contiguous scales that carry felt-like hairs. Some believe that 'Pendula' is a natural variety and wild populations of *Q. pyrenaica* do include trees with an emphatic weeping shape.
