

## Quercus robur 'Pendula'

Высота	10 - 15 (20) m
Ширина	10-15m
Крона	broad weeping, half-open crown
Кора и ветви	dark grey, deep grooves, twigs reddish-brown
Лист	obovate, lobed, green, 5 - 14 cm
Цветы	greenish-yellow catkins, 2 - 4 cm long, May
Плоды	ovoid to oval acorn, 1.5-2.5 cm, in groups of 2 to 6
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	nutritious and moist
Влажность почвы	устойчив к влажным почвам
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	England, 1788
Синонимы	Quercus robur var. dauvessii

Ornamental weeping form attaining 10-15 (20) m in height and 7 - 15 m in breadth. The branches grow somewhat away from the trunk and the twigs are very pendulous. They sometimes grow 2 m in length per year and touch the ground. The bark is dark grey, later grooved. Young twigs are reddish-brown. The variable leaves are obovate to elongated oval, 5 - 14 cm long and 4 - 8 cm wide, with 3 to 5 pairs of blunt lobes. The foliage is often densely grouped at the end of the twigs. The leaves emerge brownish-red in the spring. They do not remain on the tree for long in the winter, which produces a pronounced winter silhouette. The ovoid acorns are grouped in twos to sixes and are a maximum of one-third enclosed in the cupule: the latter is covered with small, triangular, contiguous scales. Very suitable as an arbour tree.
