

Quercus rubra 'Aurea'

Высота	8 - 10 (15) m
Ширина	8-10m
Крона	broad oval, eventually round, half-open crown
Кора и ветви	grey, stays glossy for a long time, twigs reddish-brown
Лист	oval, deeply pinnately lobed, yellow (green), 12 - 22 cm
Осенний окрас	оранжевый, красный
Цветы	golden-yellow, catkins, 5 - 8 cm long, May
Плоды	broad ovoid acorn, 2 - 2.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all, makes few demands
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру, устойчив к соли для улиц
Применение	промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	van der Bom, Oudenbosch, Netherlands, 1880

Yellow-leaved cultivar with a maximum height of 15 m, clearly shorter than the species. The crown starts off broad oval and is later round with horizontal main branches. In the crown the trunk can fork strongly: the grey bark remains smooth for a long time. The young twigs are bare and glossy reddish-brown. In the spring the leaves emerge a remarkable golden-yellow and turn greenish-yellow in the summer. The leaves are oval to obovate. The leaf edge has irregular and sharply serrated lobes, sometimes halfway incised (pinnate split). The leaves are 12 - 22 cm long, on young twigs up to 25 cm, and 10 - 15 cm wide. Depending on the amount of sun and the temperature the tree turns orange-red to scarlet in the autumn. The cylindrical flattened acorns are enclosed to a maximum of a quarter by the cupule.
