

## Robinia pseudoacacia 'Tortuosa'

|                          |                                                                          |
|--------------------------|--------------------------------------------------------------------------|
| Высота                   | 10-15 m                                                                  |
| Ширина                   | 6-10m                                                                    |
| Крона                    | oval, half-open crown, capricious growing                                |
| Кора и ветви             | brown, grey                                                              |
| Лист                     | green, feathered leaf                                                    |
| Цветы                    | cream white                                                              |
| Плоды                    | brown, seldom                                                            |
| Колючки/шипы             | Yes                                                                      |
| Ядовитость               | ядовитые части                                                           |
| Вид почвы                | clayed soil, loamy soil, sandy soil, nutrient-poor soil, calcareous soil |
| Влажность почвы          | устойчив к сухим почвам                                                  |
| Мощение                  | неустойчив к мощению                                                     |
| Зона зимостойкости       | 5a (-28,8 до -26,1 °C)                                                   |
| Устойчивость к ветру     | moderate                                                                 |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, устойчив к соли для улиц                 |
| Применение               | кашпо для деревьев, сады на крыше, промышленные зоны                     |
| Форма                    | штамбовое дерево, разветвленное дерево, многоствольное дерево            |

A moderately growing cultivar that is striking because of its twisted branches. Produces a tree 10 - 15 m high with a broad, ovoid to oval crown. Grafted on a high stem, but sometimes also on a low stem to produce a somewhat shrub-like manner of growth. A multi-trunked tree then develops later. The thorny branches grow in remarkable curves: young shoots often grow like cork-screws. The more or less hanging leaves are also somewhat twisted. Flowers appear only occasionally, only on old trees. Sensitive to strong winds. It is a valuable park tree that is used particularly for its winter silhouette. Winter hardiness zone: 5a With its tortuous and spirally twisted branches Robinia pseudoacacia 'Tortuosa' provides an exceptionally characteristic winter silhouette at a later age.
