Sorbus 'Joseph Rock'

Высота	6 - 8 m
Ширина	3-4m
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	greyish-brown, twigs greenish-brown
Лист	imparipinnate, 8 - 16 cm, 15 - 19 leaf segments, dark green, feathered leaf
Осенний окрас	красный, фиолетовый
Цветы	white, in umbels of 8 - 15 cm Ø, May/June
Плоды	creamy yellow, later amber yellow, remain on the tree for a long time
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	makes few demands, can grow on poor soils
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	небольшие сады
Форма	штамбовое дерево, многоствольное дерево
Происхождение	unknown

This is a very remarkable hybrid, origin unknown. The tree grows narrowly pyramidal to a height of approx. 8 m and is very compact. The leaves, up to approx. 16 cm in size, are imparipinnate and consist of 15 - 19 narrow obovate leaflets. In the autumn they turn red-orange to purple and, together with the remarkable fruits, constitute the major ornamental factor. At first the fruits are creamy yellow but later turn dark yellow to amber. 'Joseph Rock' is very inconsistent in the amount of fruit it bears. But the fruit stays on the tree for a long time, sometimes until mid-December, and contrasts well with the leaves' autumn colours. Unfortunately this handsome tree is sensitive to bacterial fire blight.
