

# Stewartia pseudocamellia

## 'Koreana'

Высота	8 - 12 m
Ширина	4-6m
Крона	broad pyramidal, light, open crown, capricious growing
Кора и ветви	twigs grey-brown, bark grey to grey-brown, scaling thinly revealing beige, ochre and orange bast
Лист	oval to obovate, dark green, 3 - 9 cm
Осенний окрас	оранжевый, красный
Цветы	white with yellow stamens, Ø 5 - 7 cm, June/Jul (August)
Плоды	woody capsules, approx. 2 cm long
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist, not too wet, peaty
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Форма	штамбовое дерево
Происхождение	Korea

Sturdy shrub to medium-high tree with a broad, pyramidal crown that eventually becomes oval. The smooth grey to grey-brown bark scales in thin plates to reveal beige orange, cinnamon to purplish brown bast. This produces a decorative trunk. In autumn the leaf turns a lovely orange to orange-red. The single flowers open from the end of June into July, but this can sometimes persist into August. The flowers are white with yellow stamens and resemble Camellia. The blossom is replaced by woody capsules. These burst open into five segments at the tip. Young plants may be damaged by severe frost. Although separated in the literature, 'Koreana' is not much different from the species. Features such as the slightly larger, less bowl-shaped flowers and a more orange autumn colour are also found in Japanese populations of *S. pseudocamellia*.
