

Stewartia rostrata

Высота	8 (12) m
Ширина	3-5m
Крона	broad pyramidal, light, open crown, capricious growing
Кора и ветви	twigs brown-red, bark grey to dark grey, rough
Лист	oval to obovate, dark green
Осенний окрас	красный
Цветы	white with yellow stamens, Ø 3 - 5 cm, June
Плоды	long rostrate woody capsule
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist, not too wet, peaty
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	China

Sturdy shrub to small tree with a broad, pyramidal crown that eventually becomes oval. In the wild to more than 10 m tall, but in culture no taller than approx. 8 m. Unlike *S. pseudocamellia*, the bark of *S. rostrata* does not flake off. The leaf emerges as reddish turning dark green in summer. In autumn it turns deep red. The single flowers appear in June. They are white with yellow stamens. The sepals are typically twisted, different from *S. sinensis*. The blossom is followed by the capsules that are initially red before lignifying. They are round with a long beak (rostrata - "beaked"). They burst open into five segments at the tip and contain four seeds per locule. Rare tree whose main ornamental value is created by the reddish young leaves, red fruits and excellent autumn colours. The floriferousness may vary.
