

Styrax obassia

Высота	10 - 15 m
Ширина	5-8m
Крона	broad ovoid to round, half-open crown, capricious growing
Кора и ветви	twigs reddish brown, bark grey, smooth
Лист	broad oval to round, dark green, 5 - 20 cm
Цветы	in racemes, 10 - 20 cm, white with yellow stamens, approx. 2 cm, June, fragrant flowers
Плоды	ovoid drupe, white to yellowish, hairy
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	light loamy and humic soil
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Japan, Korea, Northern China

Very large shrub or medium-size to large tree with a broad ovoid to round crown. The young twigs are reddish brown, initially hairy, later turning dark purple and hairless to slightly scaling. The bark of older trees is grey and smooth. The large leaves are almost round with a strikingly pointed tip. They are dark green. The lower two leaves of each shoot are virtually opposite each other. The other leaves are spread along the twig. The leaf base is broad, hollow and encloses the bud. The flowers open in June and hang in long racemes. The individual flowers measure approx. 2 cm and are white with yellow stamens. They have a very strong, pleasant fragrance. The tree usually blossoms very abundantly making it very bee friendly. The flowers are followed by hard, ovoid, white to yellowish hairy drupes with a dark green calyx.
