

Syringa vulgaris 'Charles Joly'

Высота	3-4 m
Ширина	2-3m
Крона	broad oval, half-open crown
Кора и ветви	flaking, brown, grey
Лист	green
Цветы	dark purple, flowers in April-May, fragrant flowers
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, all soil types
Мощение	неустойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, привлекает бабочек
Применение	кашпо для деревьев, сады на крыше, небольшие сады
Форма	штамбовое дерево, многоствольное дерево

'Charles Joly' is a large shrub to small tree with a broad oval crown of 3-4 m in height. The young twigs are slightly reddish-tinged. The old bark is grey-brown and flakes off slightly in small patches later in life. The broad ovoid leaves are mid-green in colour. The flower panicles are large and relatively narrow. They are about 12-22 cm long and 7-10 cm wide. The individual flowers, measuring about 1.6 cm, are relatively small. The flower buds are very dark purple. The opened flowers are dark purple and semi-filled. As the inner petals of the flowers are often raised and slightly twisted, the lighter purple underside is visible, creating a two-coloured effect. The flowers have a strong and pleasant fragrance. The flowers open in the second half of April and first week of May.

Syringa vulgaris grows in any nutritious and humus-rich soil. The plant prefers neutral to calcareous soil. 'Charles Joly' is very suitable for use in parks and gardens and was introduced in 1896 by Victor Lemoine & Fils in Nancy, France. Hardiness zone 4.
