## Tetradium daniellii var. hupehensis

Высота	10 - 20 m
Ширина	8-12m
Крона	broad fan-shaped, half-open crown, capricious growing
Кора и ветви	grey, smooth bark, twigs olive green, velvety grey hair
Лист	imparipinnate, with 5 - 9 leaf segments, dark green, 20 - 35 cm, feathered leaf
Цветы	small white flowers in broad pyramidal plumes, June/July, fragrant flowers
Плоды	clearly rostrate fruit, reddish purple to black, Ø 0.8 - 1 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well-permeable, rich in humus, not too wet
Мощение	неустойчив к мощению
Зона зимостойкости	7а (-17,7 до -15,0 °C)
Устойчивость к ветру	moderate
Дерево-среда обитания для животных	притягивает бабочек
Применение	кашпо для деревьев
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Central China
Синонимы	Euodia hupehensis

Fast-growing solitary tree with a semi-open, broad, fan-shaped crown on a short trunk. The smooth bark is dark grey and has lenticels. Twigs are olive green, with velvety hair, and have small, whitish lenticels. They turn greyish brown the second year. The imparipinnate leaves consist of 5 - 9 opposed leaf segments and are 20 – 35 cm long. Each leaflet is ovoid and tapers to a point, 5 -12 cm long with a short stem. The upper side of the leaf is dark green while the underside is light green. Aromatic white flowers, each 0.3 – 0.5 cm, grow in broad, pyramidal plumes of 10 – 15 cm. Reddish purple to black fruit appears after flowering. For a long time, this tree was known as Euodia hupehensis, but now it is considered a variety of T. daniellii. Tetradium daniellii var. hupehensis is a tree valued for its abundant summer flowers and the decorative dark-coloured fruits that appear in the autumn.
