

Tilia cordata 'Savaria'

Высота	12 - 20 m
Ширина	7-10m
Крона	pyramidal, later oval to ovoid, half-open crown
Кора и ветви	twigs green, later reddish brown, bark dark brown, grooved
Лист	more or less round with broad, heart-shaped base and pointed tip, dark green, 7 - 12 cm
Цветы	in corymbs, 5 - 9 together, yellow to cream-coloured, June/July, fragrant flowers
Плоды	round to ovate, Ø 0.5 - 0.8 cm, first felt-like then bare
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any, tolerates drought
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	very good, also tolerates sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	аллеи и широкие улицы, побережье
Форма	штамбовое дерево, многоствольное дерево
Происхождение	M. Józsa, Prenor Faiskola, Szombathely, Hungary, 2000

Healthy tree with a uniform crown to approx. 20 m tall and 10 m spread. Initially has a pyramidal crown with a continuous trunk and ascending branching. Later the crown spreads becoming oval to ovoid. The young twigs are green with reddish brown, mature bark is dark brown and grooved. The leaf is virtually round with a heart-shaped base and abruptly pointed tip. It is dark green and strikingly thick and robust. Fragrant flowers appear in early summer, growing in short corymbs. Fairly small fruits follow in late summer. First they are covered with grey felt-like hairs, later bare. Closely resembles 'Greenspire' but with thicker and firmer leaf. This makes 'Savaria' less susceptible to aphid and other infestations.
