

Toona sinensis

| | |
|------------------------------------|---|
| Высота | 15 - 20 m |
| Ширина | 7-10m |
| Крона | flattened spherical to broad oval, half-open crown |
| Кора и ветви | brownish grey bark with lengthwise splits, twigs have fine hairs |
| Лист | imparipinnate, 40 - 75 cm long, glossy dark green, feathered leaf |
| Цветы | white, in pendulous plumes to 50 cm long, June/July |
| Плоды | woody capsule with 5 splits containing winged seeds, Ø 2 - 3 cm |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | good, nutrient-rich soil |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 6b (-20,5 до -17,8 °C) |
| Устойчивость к ветру | fairly |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6 |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, привлекает бабочек |
| Форма | штамбовое дерево, многоствольное дерево |
| Происхождение | China |
| Синонимы | Cedrela sinensis |

Unique, lovely park tree that bears some resemblance to Ailanthus altissima. Grows vertically at first but later becomes broader. The smooth, brownish grey bark becomes grooved later. The twigs are a coppery green and have soft hair. When damaged, the bark and leaves give off an unpleasant odour. The imparipinnate leaves are 40 – 75 cm long and consist of 20 – 26 leaf segments. These are elongated, 8 - 13 cm in size, bare and glossy, dark green on top. The leaves are light green and hairy along the veins on the underside. Small, unpleasant-smelling white flowers appear in pendulous plumes up to 50 cm long. After flowering, a woody capsule with winged seeds develops. Toona sinensis only flowers during hot summers. 'Flamingo' is a lovely cultivar with leaves that are pink when they emerge. Toona sinensis has a brownish-grey bark that flakes off when the tree is older. The flaking platelets bend somewhat outwards. Bark and leaf give off an unpleasant smell when damaged.
