

Ulmus 'Camperdownii'

| | |
|------------------------------------|--|
| Высота | 6 - 10 m |
| Ширина | 6-8m |
| Крона | broad weeping, dark, dense crown |
| Кора и ветви | smooth, silver-grey, later dark grey with black grooves, twigs brown |
| Лист | broad obovate, upper side rough, dark green, 8 - 16 cm |
| Цветы | in dense bundles on short stems, light green, March/April |
| Плоды | flat winged nutlets, round to elliptical, brown |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | moist and light, favours calcareous soils |
| Влажность почвы | устойчив к влажным почвам, устойчив к коротким наводнениям |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 5a (-28,8 до -26,1 °C) |
| Устойчивость к ветру | good |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек |
| Форма | штамбовое дерево |
| Происхождение | Camperdown House, Dundee, Scotland, 1850 |
| Синонимы | Ulmus glabra 'Camperdownii' |

Handsome weeping tree with sturdy drooping branches that often reach the ground. Forms a closed crown. Is grafted onto *U. glabra*, usually at a height of between 2 and 2.5 m. The trunk of the young tree is smooth and silver-grey: later it turns dark grey with black grooves: old trunks have a network of grooves. Young twigs are brown, slightly hairy and have lenticels: later they become bare and greyish-brown. The large leaves grow close together, which causes dense foliage to develop so that the leaves cover the entire branch. The leaves are hairy on both sides and roughly serrated: the upper side feels rough. On one side the leaf stalk is covered by the asymmetrical foot, a characteristic of elm leaves. Very thick flower buds open just before the leaves emerge. Sensitive to Dutch elm disease.
