

Ulmus 'Frontier'

Высота	6 - 10 m
Ширина	6-9m
Крона	pyramidal, later oval, half-open crown
Кора и ветви	bark grey-green, smooth
Лист	oval to elongated-ovate, glossy dark green
Осенний окрас	красный
Цветы	in dense clusters, green, September
Плоды	flat winged nutlets, oval
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile, moist and airy, tolerates limy soil
Влажность почвы	устойчив к влажным почвам, устойчив к коротким наводнениям
Мощение	устойчив к мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	fairly to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Происхождение	U.S. National Arboretum, Washington DC, USA, 1990

A medium-size tree with an initially ascending, pyramidal crown and a good upright central leader. Mature trees have an oval crown and grow to a height of 6 to 10 m. The grey-green bark is smooth. The relatively small leaf is oval to elongated-ovate and glossy dark green. In autumn it turns an attractive red to dark wine red. Unlike many other Elms, 'Frontier' blossoms in September and not in spring. The tree originated as a hybrid between *Ulmus minor* and *Ulmus parvifolia*. The latter is an Asian species that is evergreen in milder climates. *Ulmus parvifolia* naturally has a very strong resistance to Dutch elm disease. To a certain extent, 'Frontier' has inherited this resistance. Its oval crown shape makes it suitable as an avenue tree or street tree.
