

Ulmus 'Plantijn'

Высота	15 - 18 m
Ширина	6-8m
Крона	broad oval to fan-shaped, dark, dense crown
Кора и ветви	smooth, silver-grey, later with blackish-grey grooves, twigs grey
Лист	ovoid, greyish-green, up to 16 cm long
Осенний окрас	желтый
Цветы	in dense bunches on short stems, light green, March/April
Плоды	flat winged nutlets, round to elliptical, brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist and light, favours calcareous soils
Влажность почвы	устойчив к влажным почвам, устойчив к коротким наводнениям
Мощение	устойчив к мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	De Dorschkamp, Wageningen, Netherlands, 1973

The 'Plantijn' is a Dutch cultivar that grows vigorously at first. When the tree is older the growth-rate decelerates somewhat. The crown is less columnar than that of 'Lobel'. 'Plantijn' grows at first spherical to broad oval but eventually forms a fan-shaped crown. This is dense and closed with a more or less ascending main trunk and dense lateral branches that grow at something of an angle along the main trunk. Older trees have a number of twigs that droop decoratively. The tree eventually attains a breadth of approx. 6 - 8 m. The leaves are greyish-green and they curl up under dry conditions. In the autumn they turn yellow. This cultivar is little sensitive to Dutch elm disease. 'Plantijn' was found in 1973 at the same time as 'Doedens' and 'Lobel' and is the least wind-resistant of these cultivars.
