

Magnolia grandiflora ALTA ('TMGH')

Высота	3-5 m
Ширина	2-3m
Крона	broad columnar to narrow oval crown, dense crown
Лист	green, evergreen
Цветы	white, flowers in June-September
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	good
Применение	аллеи и широкие улицы, кашпо для деревьев
Форма	разветвленное дерево
Происхождение	Vic John Cicoella from Oakville, New South Wales, Australia, 2004

Whereas the species *M. grandiflora* is somewhat irregular and forms a broad pyramidal to round crown, ALTA, on the contrary, grows with a dense, broad columnar to narrow oval crown. This will create, without too much corrective pruning, a narrow avenue tree. It is a good-growing tree that grows about 5 m tall. The evergreen, oval, leaves are a glossy dark green with a light brown hairy underside. The thick, leathery leaves are highly resistant to wind. Large, white flowers appear throughout the summer, with a lovely fragrance. The flowers stand out well against the dark green background formed by the leaves.

Grows in any type of soil, provided it is sufficiently permeable and deeply rooted. Excellent tree for architectural applications and places where a Mediterranean atmosphere should be created. Hardiness zone 7a.
