

Picea omorika 'Pendula'

Высота	8-10 m
Ширина	2-3m
Крона	narrow weeping
Кора и ветви	dark brown, flaking bark, brown, hairy twigs
Лист	needles glossy dark green, 0.5 - 2 cm, silvery grey underneath, evergreen
Цветы	inconspicuous, ? erect, long ovoid, purplish red, ? bright purplish red, may
Плоды	few cones
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all, moisture-retentive and well-permeable
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, дерево-источник питания для птиц
Форма	солитерное хвойное дерево
Происхождение	U.S. National Arboretum, Washington D.C., USA, 2001

Picea omorika 'Pendula' is a slow-growing small tree that eventually becomes a small tree from a shrub form. Forms a continuous central branch from which slightly drooping main branches grow and more strongly drooping side branches. Like the species Picea omorika, the tree is narrowly pyramidal. The trunk, bark and main and side branches of this densely branched cultivar are similar to Picea omorika in shape and colour. This also applies to the dark green needles. 'Pendula' usually produces very few cones. This beautiful cultivar grows about 10 m tall after many years.

Was introduced to Germany in 1920. Hardiness zone: 5a
