

Staphylea trifolia

Высота	2-5 m
Ширина	2-4m
Крона	oval, later vase-shaped, half open crown
Кора и ветви	brown
Лист	green
Цветы	creamy white to greenish white, flowers in May, fragrant flowers
Плоды	yellow brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, calcareous soil
Мощение	неустойчив к мощению
Зона зимостойкости	5b (-26,0 до -23,4 °C)
Устойчивость к ветру	fairly
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, привлекает бабочек
Применение	кашпо для деревьев, небольшие сады
Форма	многоствольное дерево
Происхождение	Eastern North America

Staphylea trifolia is a large, multi-stemmed shrub, rarely a small tree, up to about 5 m high. The species grows distinctly upright and is quite narrow when young. Later, it widens and will develop a vase-shaped crown. The annual branches are yellow-green and initially hairy. The pale green leaf buds are always slightly angled upwards. The leaves are always trifoliate, with the top leaf having a remarkably long stalk. The upper side of the leaves is dark green, the underside is lighter and slightly downy-hairy. In May, the flowers open in nodding clusters. The individual flowers are greenish-white with pale green calyxes. The colour impression is greenish-white to cream. The flowers are followed by the typically inflated fruits characteristic of any Staphylea. In S. trifolia, they are 3-lobed and 3-4 cm long.

Staphylea trifolia grows naturally on moist riverbanks. It is a strong shrub that will grow well on any nutritious, sufficiently moist but permeable soil. It is a typical warm-season shrub that should preferably be planted in a sunny location.
