## Abies veitchii

Высота	25 - 30 m
Ширина	6-8m
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	twigs reddish brown to brownish green, bark grey, smooth
Лист	soft needles, glossy green, with white stomatal stripes on the underside, 1.5 - 3 cm long, evergreen
Цветы	yellow with purplish red, 1 - 1.5 cm pendent, green, June, fragrant flowers
Плоды	narrow cylindrical cones, bluish purple, 4 - 8 cm long and 3 cm wide
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	fertile, well-drained, neutral to light acidic
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Форма	солитерное хвойное дерево
Происхождение	Central and southern Japan

Large conifer with an upright, narrow pyramidal crown that can grow to over 25 m tall. The crown has a regular shape. Young twigs are reddish brown to brownish green and the bark is grey and smooth. The needles feel soft, they are 1.5 to 3 cm long, glossy dark green on top. On the underside of the needles two pure white stomatal stripes are visible. The needles are attached brush-like around the upper side of the twig and all point forwards. The narrow cylindrical cones are bluish purple. The species name refers to John Gould Veitch who founded the famous Veitch tree nursery. He 'discovered' this species in 1861 on Mt. Fuji, Japan. Graceful conifer with an intensely green needle colour that is suitable for parks and large gardens. Grows on any fertile, well-drained soil that is neutral to light acidic.
