

Chamaecyparis lawsoniana

'Wisselii'

Высота	20-25 m
Ширина	4-6m
Крона	narrow pyramidal, dark, dense crown
Кора и ветви	reddisch brown
Лист	green, blue green, evergreen
Цветы	inconspicuous, fragrant flowers
Плоды	round cones, reddish brown, 0.8 cm, in small bunches
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	промышленные зоны
Форма	штамбовое дерево, солитерное хвойное дерево

Chamaecyparis lawsoniana 'Wisselii' is a stately, pyramidal growing conifer that grows 20 - 25 m high. Like the species *C. lawsoniana*, the twigs are brown and the bark is reddish-brown. 'Wisselii' is rather coarsely branched and the ends of the twigs are always almost vertically erect, which is characteristic of this cultivar. The foliage is also coarser than in most other cultivars of *C. lawsoniana*, but the dense branching gives the tree a full appearance. The scales are a slightly glossy dark green and contribute greatly to the stately appearance of the tree. Chamaecyparis likes a well-drained, humous soil and poorly tolerates chalky soil.

This cultivar was created in 1893 at the nursery of F. van der Wissel in Epe. Hardiness zone: 6b
