

Cryptomeria japonica 'Globosa Nana'

Высота	1 - 2 m, fast growing
Ширина	1-2m
Крона	round/spherical, dark, dense crown
Кора и ветви	flaking, reddish brown
Лист	green/yellow, evergreen
Цветы	inconspicuous, flowers in april
Плоды	spherical cone with spiked seed scales, 1.5 - 3 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loamy soil, sandy soil, peaty soil, acid soil
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	небольшие сады, сады в патио
Форма	штамбовое дерево, солитерное хвойное дерево

This slow-growing cultivar forms an almost spherical large shrub to about 2 m high. 'Globosa Nana' is very regularly branched with short twigs that branch strongly at the tips, the tips of which are typically curved. The scaly needles are 5 - 8 mm long and yellow-green. In winter, the foliage turns blue-green. 'Globosa Nana' has a very regular plant form and grows fine. It is also well hardy and can therefore be widely used in gardens and parks.

The name 'Globosa Nana' was given in the Netherlands in 1923, but the plant was probably imported from Japan and had therefore been in cultivation there longer. Hardiness zone: 6a
