

Larix kaempferi 'Pendula'

Высота	5 - 7 m
Ширина	3-5m
Крона	broad, weeping, dark, dense crown, capricious growing
Кора и ветви	twigs brown-red, bark grey-brown to reddish brown, scaling
Лист	needles, on short shoots in clusters, single on long shoots, dark green, 2 - 3 cm
Осенний окрас	желтый
Цветы	inconspicuous 0,5 - 1 cm, yellowish reddish brown, 1 - 1.5 cm, April
Плоды	oval to round cones, 2 - 3 cm, yellowish brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any except acidic soil
Мощение	неустойчив к мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	побережье, промышленные зоны, небольшие сады
Форма	штамбовое дерево, разветвленное дерево, солитерное хвойное дерево
Происхождение	Herm. A. Hesse, Weener, Germany, before 1896

A relatively slow-growing, deciduous, broad weeping tree that can eventually grow to 5 to 7 m tall. The tree produces upwardly winding main branches and heavily drooping lateral branches. Like the species the twigs are brownish red. The quite thick mature bark is grey-brown to reddish brown, later scaling. The soft needles are in clusters of 40 - 50 on short shoots along the older branches. On (year-old) long shoots, they stand alone. They are 2 to 3.5 cm and dark green. In autumn, they turn golden yellow before falling off. It is not easy to find a place for this particularly graceful cultivar because of its broad, weeping growth habit. The tree is best suited to parks and large gardens. Grows on any soil except acidic.
