

Pinus heldreichii

Высота	25 (30) m
Ширина	8-12m
Крона	broad oval, dark, dense crown
Кора и ветви	twigs brown-grey to light brown, bark grey-brown, thick and deeply grooved
Лист	stiff needles, curved towards the twig to straight, 2 together, 6 - 11 cm, glossy dark green, evergreen
Цветы	in clusters b the young shoots, bright yellow, fragrant flowers
Плоды	cones, 6 - 10 cm long, 4 - 6 cm wide
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	any, tolerates limy soil
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево, солитерное хвойное дерево
Происхождение	Bulgaria, Bosnia and Herzegovina, Northern Greece and Southern Italy
Синонимы	Pinus leucodermis, Pinus heldreichii var. leucodermis

A beautifully shaped large tree, growing up to 20 m tall with dense branching. The crown is broad oval although it can become irregularly round on older trees. The thick, mature bark is grey-brown and deeply grooved revealing the light brown-yellow bast. The German name Schlangenhaut-Kiefer refers to this feature. The tips of the stiff, glossy, dark green needles are usually curved towards the twigs. They are in twos, 6 to 11 cm long and encased at the base by a grey, papery membrane. The oval to narrow oval cones are in twos or threes on short stems. First they are dark green to bluish purple, turning matt light brown to grey when ripening. A variable species which is often still found under the synonym P. leucodermis or P. heldreichii var. Leucodermis. Has few demands as to soil, tolerates limy soil and wind.
