

Pinus jeffreyi

Высота	20 - 25 (50) m
Ширина	8-12m
Крона	broad conical, later rounded, half-open crown
Кора и ветви	blackish brown bark, grooved, orange-brown to green twigs, later black
Лист	needles, 3 together, bluish green, twisted, 12 - 22 cm, evergreen
Цветы	unremarkable, fragrant flowers
Плоды	hanging, pointed cone, 14 - 26 cm, purplish brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all
Мощение	неустойчив к мощению
Зона зимостойкости	6b (-20,5 до -17,8 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	промышленные зоны
Форма	штамбовое дерево, солитерное хвойное дерево
Происхождение	western North America

Large tree with a semi-closed conical crown, flattening out somewhat when mature. Moderately fast-growing, with horizontal branching. In its natural site, the tree can grow to approx. 50 m in height. The bark is blackish brown, later grooved with loose plates and turning purplish brown. When cut, the smooth twigs, glossy when mature, smell like oranges. The twisted needles are fairly stiff, erect and pointy. They are approx. 18 cm long, a striking greyish blue colour and grow in bundles of 3 together. Crushed needles have a characteristic petroleum odour. When fully ripe, the purplish brown cones fall off. Pinus jeffreyi is suited to any type of soil and adapts well. Although the tree grows on dry, rocky mountain slopes in its natural habitat, it thrives best on permeable, light and moisture-retentive soil.
