

## Pinus wallichiana

Высота	15 - 30 (50) m
Ширина	10-20m
Крона	broadly pyramidal, later spreading out very broadly, half-open crown, capricious growing
Кора и ветви	dark grey and flaking, twigs bare and covered with a bluish frosting
Лист	hanging needles, 5 together, soft and thin, bluish grey, bent, evergreen
Цветы	unremarkable, pale yellow, on a short stem, reddish, fragrant flowers
Плоды	upright cones, later hanging, single, 15 - 25 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well-permeable, somewhat acidic
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	moderate
Дерево-среда обитания для животных	дерево-источник питания для птиц
Применение	кашпо для деревьев, сады на крыше, промышленные зоны
Форма	многоствольное дерево, штамбовое хвойное дерево, солитерное хвойное дерево
Происхождение	Himalayan mountains
Синонимы	Pinus griffithii

Particularly lovely species with an open crown. Especially striking thanks to its long, hanging needles. The crown has a broad, pyramidal shape at first, but later it spreads out very broadly with horizontally protruding branches. When growing freely on its own, the branches stay on the tree all the way down to the ground. In its natural habitat, the tree can grow to a height of 50 m, but it is usually smaller when cultivated. The trunk is smooth and dark grey at first, but later flaking off in plates. The blue frosted needles are bent, remarkably long and thin and hang straight down, particularly from young twigs. Young cones are upright, but later they hang down as well. They are 15 - 25 cm long and 3 - 5 cm thick. Young trees, in particular, require support in windy sites and are sensitive to frost. Tolerates dry conditions.
