

Acer davidii

Высота	8 - 12 (15) m
Ширина	7-11m
Крона	oval to round, light, open crown, capricious growing
Кора и ветви	twigs purple with greyish white longitudinal stripes
Лист	oval to elongated, dark green, 8 - 16 cm
Осенний окрас	желтый, оранжевый, красный
Цветы	pendent corymb-shaped racemes, light yellow, May
Плоды	single-seeded, single-winged, light green
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	all soils
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Central China

Because of its conspicuously striped bark *A. davidii*, together with *A. capillipes* and *A. rufrinerve*, belong to the so-called “Snake Bark maples”. The young twigs are dark purple- red and retain this colour during winter. The older twigs and stem have conspicuously greyish white longitudinal stripes. The leaves are less prominently lobed and unlike *A. capillipes* the leaves of *A. davidii* are hairy on the under surface along the veins. The leaf of young plants is ternate, those of older trees do not have lobes. The flowers are unisexual, male and female flowers appear on one plant. The plant has a strongly branched and compact root system. The application of the plant is restricted to parks and larger gardens because it is less suitable for use in hard surfaces. This decorative tree will also stand out well in green borders.
