

Acer palmatum

Высота	8 - 12 м
Ширина	7-10м
Крона	fan shaped, half-open crown, capricious growing
Кора и ветви	brown to grey-brown, smooth
Лист	palmately lobed, green, 6 - 10 cm, orange-red autumn colour
Осенний окрас	оранжевый, красный
Цветы	pendent stalked panicles, purple red, April/May
Плоды	winged nutlet (samara), 1 - 1.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well permeating humic sandy soil
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	China, Japan and Korea

A slow growing large shrub to a small tree with multiple stems that can reach a height up to circa 10 m., rarely up to 15 m. The crown is sometimes as wide as it is high. The leaf, slightly grooved, is palmately lobed and has five to seven lobes (sometimes nine). These are long and pointed. The leaf turns brown-red to orange-red in autumn. A. palmatum is a species that comes in many shapes and that thrives best in well permeating humic soil. A partially shaded location is best, but a sunny location will be tolerated. The plant can be applied in gardens, parks and as a solitary. More than 1,000 cultivars of A. palmatum are known, of which many are not cultivated anymore. Most are shrubs. They show an enormous variety in growth habit, shapes and colours of the leaves.
