

Acer palmatum 'Sangokaku'

Высота	3-10 m
Ширина	3-8m
Крона	broad ovoid, dark, dense crown, capricious growing
Кора и ветви	brown, grey
Лист	green
Осенний окрас	желтый, оранжевый
Цветы	red, flowers in May
Плоды	red
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, acid soil
Мощение	неустойчив к мощению
Зона зимостойкости	6 (-23,3 до -17,8 °C)
Устойчивость к ветру	moderate
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево

Acer palmatum 'Sangokaku' is a small tree that can eventually grow about 10 m tall. However, it usually remains a large shrub. The crown is broad ovoid to inverted ovoid. Most striking feature of 'Sangokaku' are its brilliant intense coral-red winter twigs. In summer, the twigs, which are then greenish-yellow, are barely noticeable. The leaves are 5-lobed and bright green. In autumn, the leaves turn a deep golden yellow before falling off and revealing the colourful winter twigs in their full glory. Not only the colourful twigs, but also the beautiful autumn colours are an important ornamental value of 'Sangokaku'. If young twigs do not ripen sufficiently in the autumn, they may die off completely or partially. In older trees, the young twigs are less conspicuous, but new, colourful twigs are formed after light pruning. Was introduced by Ireland's Daisy Hill Nurseries around 1920. 'Sangokaku' is sometimes still referred to with the synonym 'Senkaki'. Hardiness zone: 6
