

Acer pseudoplatanus

Высота	25 - 30 (40) m, fast growing
Ширина	20-25m
Крона	wide oval, dark, dense crown
Кора и ветви	bark grey, branches grey to olive-green
Лист	5 lobes, green, 12 - 20 cm, in autumn matt golden yellow
Цветы	yellow-green, in pendent racemes, April
Плоды	winged nutlets (samara), 3 - 3.5 cm
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	any soil
Влажность почвы	устойчив к коротким наводнениям
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Применение	аллеи и широкие улицы, побережье, промышленные зоны
Форма	штамбовое дерево, многоствольное дерево
Происхождение	indigenous from Europe to West Asia

Imposing tree with a thick, undulating crown. Crown shapes can vary with seedlings. Mature trees can reach a height of 40 m and can become 500 years of age. It has green leaf buds which is strikingly different from A. platanoides which has red leaf buds. The decorative grey trunk flakes off in small pieces. The leaf stalk does not contain milky sap, an important difference with A. platanoides. The leaf is green on top, the underside is grey pilose. Autumn colour is golden yellow, but not as beautiful as A. platanoides. The wings of the nutlets are in a right to acute angle in relation to each other. Those of A. platanoides are in a wide angle. Deep rooting. Tolerant to wet and cold soils, can not stand in water for a long time. Suitable for industrial estates and coastal areas. Slightly sensitive to salt for icy roads.
