

Acer pseudoplatanus 'Erectum'

Высота	20 - 25 m
Ширина	6-10m
Крона	egg-shaped, wider with age, dark, dense crown
Кора и ветви	bark grey, branches grey to olive-green
Лист	5 lobes, green, up to 30 cm, in autumn matt golden yellow
Осенний окрас	желтый
Цветы	yellow-green, in pendent racemes, April
Плоды	winged nutlets (samara), 3 - 3.5
Колючки/шипы	None
Ядовитость	ядовитые части
Вид почвы	any soil
Влажность почвы	устойчив к коротким наводнениям
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Применение	аллеи и широкие улицы, побережье, промышленные зоны
Форма	штамбовое дерево
Происхождение	The Hague, The Netherlands, 1955

Medium-sized to large tree, reaching a height of 25 m. A tree that is very easy to maintain and requires little pruning. Juvenile trees have a columnar shape, but are in maturity growing wider with more spreading branches. The juvenile shoots are light green. The shallowly lobed leaf is larger than of the species and has short, thick leaf stalks with an almost straight leaf base. Flowers are of the species, appearing while the leaf emerges. Abundance of fruit. 'Erectum' was selected in 1955 by the well-known dendrologist Doorenbos. The original tree was planted as a seedling on the Nachtegaalplein in The Hague (NL). It is a good street and avenue tree, well suited for application in cities. Deep rooting with good branching. 'Erectum' demands little from the soil: tolerates wet and cold soils. Wind and sea wind resistant.
