

Acer rubrum

Высота	15 - 20 (25) m
Ширина	10-14m
Крона	round to conical, dark, dense crown
Кора и ветви	grey trunk, dark red branches
Лист	palmete, lobed, bright green, circa 10
Осенний окрас	оранжевый, красный
Цветы	red, in small umbels, March/April, fragrant flowers
Плоды	winged nutlets, ca 2 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist, lime-free soil
Влажность почвы	устойчив к коротким наводнениям, устойчив к длительным наводнениям
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	moderate to poor
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, медонос
Применение	аллеи и широкие улицы
Форма	штамбовое дерево, многоствольное дерево
Происхождение	eastern North America

Medium-sized tree with a spherical to conical crown, dense and closed. In its original habitat of North America specimen can be found reaching 25 m. In our regions its maximum height is circa 15 m. The young twigs have an eye-catching red-brown colour. The leaf stalk of the bright green leaf is red too. The underside of the leaf has a blue green colour. The autumn colouring into orange-red hues is one of the most important ornamental traits. The red, dioecious, flowers emerge before the leaves unfurl. The fruits ripen early in summer and drop soon. The tree grows a heavy main root with many fibrous root branches. In limy soil the growth stunts. In this soil, and in dry soil as well, there will be no autumn colouring. Poor tolerance to (sea) wind. Good hardiness. Acer rubrum is at its most spectacular when in full autumn dress. The colouring is most spectacular when the tree grows in moist, slightly acid soils.
