

Acer rubrum 'Embers'

Высота	12 - 15 m
Ширина	9-12m
Крона	broad oval, dark, dense crown
Кора и ветви	grey trunk, dark reddish-brown twigs
Лист	palmate, lobed, dark green, ca 10 cm
Осенний окрас	красный
Цветы	red, in small umbels, march/april
Плоды	winged nutlets, always in pairs, ca 2 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	moist, not calcareous
Мощение	устойчив к частичному мощению
Зона зимостойкости	4 (-34,4 до -28,9 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	аллеи и широкие улицы
Форма	штамбовое дерево
Синонимы	Acer x freemanii 'Embers'

Vigorously growing, medium-size tree up to ca 15 m in height. The crown is a regular, broad oval, eventually broad and rounded. The young shoots are reddish brown, and the leaf stems of the dark green, lobed leaves are also reddish. The leaf is somewhat thicker than general in the species. In autumn, the leaf turns a beautiful scarlet. The autumn colour persists quite a long time before the leaf falls. Due to its vigorous growth and fairly broad crown, 'Embers' is less suitable for use in narrower streets. The tree really comes into its own in avenues, wide streets and parks. Its growth will stagnate on calcareous soil. In such soil, as with very dry soil, the autumn change of colour will be less noticeable. 'Embers' is very tolerant of (cold) wind.
