

Amelanchier arborea 'Robin Hill'

Высота	5 - 10 m
Ширина	3-4m
Крона	oval, later broader, half-open crown
Кора и ветви	grey-brown, smooth to slightly grooved
Лист	reverse ovoid to oval, dark green, 3 - 7 cm
Осенний окрас	желтый, красный
Цветы	clusters, pink in the bud, later white, early April
Плоды	first dark red, later black, small, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	makes very few demands on the soil, prefers calcareous soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	5a (-28,8 до -26,1 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, устойчив к ветру, устойчив к соли для улиц
Применение	аллеи и широкие улицы, узкие улицы, кашпо для деревьев, сады на крыше, промышленные зоны, небольшие сады, сады в патио
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Robin Hill Arboretum, Lyndonville, New York, before 1970

Small tree with a striking winter silhouette thanks to the fine branching pattern. In the winter, the grey colour of the bark is striking. The reverse ovoid to oval, densely haired leaves have a pointy top and are dark green on the top and greyish green underneath. They turn spectacular yellow and red tints in the autumn. The flowers are in large, loose, pendulous clusters. When in the bud, they are pink, but turn completely white when open. The warmer the weather, the whiter the colour of the flowers. Berries appear in the autumn and turn from a dark red colour to black. 'Robin Hill' produces very little fruit. The tree has a fine root system close to the surface. It places little demands on the soil, prefers slightly calcareous soil that is not too wet.
