

Betula medwediewii 'Gold Bark'

Высота	6 - 10 m
Ширина	5-7m
Крона	broad pyramidal to round, half-open crown
Кора и ветви	glossy, pale gold, slightly peeling
Лист	wide elliptical to ovate, shiny deep green, 8 - 12 cm
Осенний окрас	желтый
Цветы	Catkins, ♀ 3 - 3.5 cm and erect, ♂ 4 - 9 cm, yellow-green, May
Плоды	yellowish brown fruiting catkins, 4 - 4.5 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, tolerates slight drought
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	very good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	кашпо для деревьев, сады на крыше
Форма	штамбовое дерево, многоствольное дерево
Происхождение	Alphons van der Bom, Oudenbosch, Netherlands, circa 1965

Grows from a multi-stemmed shrub into a small or medium-size tree. The broadly pyramidal to virtually round crown is densely branched, with sturdy, fairly thick twigs. The young twigs are brown to grey-brown with conspicuous lenticels. Older branches and bark have a glossy, pale gold colour. The trunk peels only lightly. The leaves turn intense golden yellow in autumn. The leaves are fairly large for a birch. As the tree ages, the leaves will become smaller. Blossoming comes fairly late in spring. Typically of the species, 'Gold Bark' blossoms with fairly large catkins, which adds to its decorative value. Was selected for its good bark colour and the more tree-shaped habit. Although the tree tolerates wind well, it does best in a somewhat sheltered place.
