

Betula pendula FASTIGIATA JOES ('Jolep1')

Высота	15-20 m
Ширина	3-4m
Крона	column-shaped, dark, dense crown
Кора и ветви	grey-white, flaking
Лист	green
Осенний окрас	желтый, оранжевый
Цветы	yellow-green, flowers in April
Плоды	brown
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil, peaty soil, nutrient-poor soil, acid soil
Мощение	устойчив к частичному мощению
Зона зимостойкости	2 (-45,5 до -40,1 °C)
Устойчивость к ветру	moderate to good, no sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	узкие улицы, небольшие сады
Форма	разветвленное дерево

FASTIGIATA JOES is a columnar birch with a tighter crown shape than 'Fastigiata'. The upright twigs are straighter, thicker and therefore sturdier than in 'Fastigiata', giving the tree a more robust appearance. The crown is quite dense (for a birch) and the twig tops do not hang down as much as in 'Fastigiata'. Already within a few years, the striking grey-white trunk is visible. This forms a good combination with the dark green foliage of FASTIGIATA JOES.

Handsome cultivar that is widely applicable in parks, gardens, streets and avenues. Because of its shape, it is also very suitable for narrow profiles, in shopping centres and residential areas. FASTIGIATA JOES was found by John de Lepper, Hulsel, the Netherlands and introduced in 2014. Hardiness zone 2
