

Betula pendula 'Youngii'

Высота	4 - 6 m, dependent on the position of the graft union
Ширина	6-8m
Крона	wide weeping, half-open crown, capricious growing
Кора и ветви	white, slightly peeling, later deeply furrowed at the base
Лист	triangular to diamond-shaped, fresh green, 3 - 7 cm
Осенний окрас	желтый
Цветы	catkins yellow green, erect and + 1 cm, 3 - 8 cm, April
Плоды	pendulous fruiting catkins, circa 2 - 4 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	loose soil, requires little moist
Влажность почвы	устойчив к сухим почвам
Мощение	неустойчив к мощению
Зона зимостойкости	2 (-45,5 до -40,1 °C)
Устойчивость к ветру	very good, no sea wind
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
Форма	штамбовое дерево, разветвленное дерево, многоствольное дерево
Происхождение	England, + 1870

A weeping form with a top that does not grow upright. Usually grafted at a height of circa 2.5 m. The crown, which is strongly branching and horizontal, starts at the graft union. The branches are gracefully pendent, creating an umbrella-shaped tree. The eventual height depends strongly of the height of the graft union. Width of the crown can be circa 6 - 8 m. As rootstock the Betula pendula is used. The twigs are red brown and have warty lenticels. the leaf is triangular and linear pointed and has a double-toothed margin. The autumn colour is strikingly yellow, 'Youngii' rarely flowers. Hillocks, soil compaction and variable water levels have a negative influence on the health of this birch. The tree is shallow-rooting. Sea wind is not tolerated well.
