

## Betula pendula 'Youngii'

<b>Высота</b>	4 - 6 m, dependent on the position of the graft union
<b>Ширина</b>	6-8m
<b>Крона</b>	wide weeping, half-open crown, capricious growing
<b>Кора и ветви</b>	white, slightly peeling, later deeply furrowed at the base
<b>Лист</b>	triangular to diamond-shaped, fresh green, 3 - 7 cm
<b>Осенний окрас</b>	желтый
<b>Цветы</b>	catkins yellow green, erect and + 1 cm, 3 - 8 cm, April
<b>Плоды</b>	pendulous fruiting catkins, circa 2 - 4 cm
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	неядовитый, обычно
<b>Вид почвы</b>	loose soil, requires little moist
<b>Влажность почвы</b>	устойчив к сухим почвам
<b>Мощение</b>	неустойчив к мощению
<b>Зона зимостойкости</b>	2 (-45,5 до -40,1 °C)
<b>Устойчивость к ветру</b>	very good, no sea wind
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру
<b>Дерево-среда обитания для животных</b>	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
<b>Применение</b>	кашпо для деревьев, сады на крыше, небольшие сады, сады в патио
<b>Форма</b>	штамбовое дерево, разветвленное дерево, многоствольное дерево
<b>Происхождение</b>	England, + 1870

A weeping form with a top that does not grow upright. Usually grafted at a height of circa 2.5 m. The crown, which is strongly branching and horizontal, starts at the graft union. The branches are gracefully pendent, creating an umbrella-shaped tree. The eventual height depends strongly of the height of the graft union. Width of the crown can be circa 6 - 8 m. As rootstock the Betula pendula is used. The twigs are red brown and have warty lenticels. the leaf is triangular and linear pointed and has a double-toothed margin. The autumn colour is strikingly yellow, 'Youngii' rarely flowers. Hillocks, soil compaction and variable water levels have a negative influence on the health of this birch. The tree is shallow-rooting. Sea wind is not tolerated well.
