

Carpinus laxiflora

Высота	4 - 6 (15) m
Ширина	2-4m
Крона	flat-topped spherical, dark, dense crown, capricious growing
Кора и ветви	young twigs bear silky hairs, older branches and bark grey and smooth, later rather grooved
Лист	ovate to oval, 4 – 8 cm, matt dark green
Цветы	monoecious, April
Плоды	in separate fruiting catkins, 5 - 12 cm
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	few soil requirements, preference for loamy ground
Мощение	устойчив к частичному мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	moderate to good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6
Применение	небольшие сады
Форма	штамбовое дерево
Происхождение	Japan, Korea

A small tree under cultivation, but can grow into a medium-size or even large tree under favourable conditions. The broad crown is round to flat-topped spherical, an effect caused by the gracefully overhanging twigs. The young twigs are hairy, older twigs smooth and grey. Shallow, light grey grooves appear in the bark from as early as seven years. On emerging, the leaves are bronze to reddish: in summer they turn matt dark green. No remarkable autumn colours. Root growth is relatively close to the surface. Has few soil requirements but flourishes best in loamy soils. The rotted leaves are good soil improvers.
