

Carya glabra

| | |
|---|---|
| Высота | 15 - 25 (30) m |
| Ширина | 8-15m |
| Крона | oval, open, half-open crown |
| Кора и ветви | trunk smooth and grey, later dark brown and with a network of grooves |
| Лист | imparipinnate, glossy light green, 10 - 17 cm, feathered leaf |
| Осенний окрас | желтый |
| Цветы | catkins approx. 6 cm, flowers in terminal ears, May |
| Плоды | pear-shaped nut, approx. 2.5 - 3.5 cm, edible fruits |
| Колючки/шипы | None |
| Ядовитость | неядовитый, обычно |
| Вид почвы | rich, well-drained soil |
| Мощение | неустойчив к мощению |
| Зона зимостойкости | 5b (-26,0 до -23,4 °C) |
| Устойчивость к ветру | good |
| Прочие виды устойчивости | устойчив к морозам, зона 1 - 6, сустойчив к ветру |
| Дерево-среда обитания для животных | устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос |
| Форма | штамбовое дерево |
| Происхождение | north-east of the United States |

In its original habitat *C. glabra* is an imposing tree growing to a height of approx. 30 m: when cultured it is usually somewhat smaller. Old trees are valued for their tough durable wood. The crown is irregularly oval. Young trees have smooth grey bark. In older specimens the bark is dark brown and has a network of grooves. Young branches are very pendulous. The leaves are imparipinnate and consist of 5 to 7 narrow leaf segments. These are lanceolate to narrowly obovate. The leaves are somewhat brown tinted when they first appear but are light green in the summer. In the autumn the leaves turn colour to a golden yellow. The pear-shaped bitter nuts are light brown with a smooth shell. The nuts only partially open when they ripen. The first nuts do not appear until after approx. 25 years. The tree has a deep root system.
