

Carya laciniosa

Высота	25 - 30 m
Ширина	12-20m
Крона	conical to rounded, open, half-open crown
Кора и ветви	trunk grey, flaking off in long pieces, twigs with felt-like hair
Лист	imparipinnate with 5 to 9 leaves, light green, 10 - 22 cm, feathered leaf
Осенний окрас	желтый
Цветы	♂catkins approx. 12 - 20 cm, ♀flowers in short ears, May
Плоды	round nut, Ø approx 4 - 5 cm, husk up to 7 cm, edible, edible fruits
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	humid and rich
Мощение	неустойчив к мощению
Зона зимостойкости	6a (-23,3 до -20,6 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, медонос
Форма	штамбовое дерево
Происхождение	eastern part of the United States

A tall tree with relatively thin, strongly spreading branches and twigs. Grows up to 50 m in height in its natural habitat but is practically always smaller when cultivated. Old trees are valued for their durable carpentry wood. The bark is grey and flakes off in long plates. Young branches carry felt-like hair, The leaf is a compound of 5 to 9 lanceolate leaf segments. When rubbed they give off a strong smell. The leaf edge is serrated and fimbriate. The leaf axis is pretty well bald and sometimes remains hanging on the tree for a long time in the winter. The leaves are somewhat brown tinted when they first appear but are light green in the summer and flaming yellow in the autumn. The round, sweet, edible nuts are contained in a smooth husk that opens practically completely. Deep root system.
