

## Catalpa bignonioides 'Nana'

<b>Высота</b>	4 - 6 м
<b>Ширина</b>	5-7м
<b>Крона</b>	flat-topped globular, dark, dense crown
<b>Кора и ветви</b>	grey, shallow grooves
<b>Лист</b>	heart-shaped, fresh green, 10 - 15 cm
<b>Цветы</b>	none
<b>Плоды</b>	none, fruitless cultivar
<b>Колючки/шипы</b>	None
<b>Ядовитость</b>	нейядовитый, обычно
<b>Вид почвы</b>	few requirements, not in wet soils
<b>Мощение</b>	устойчив к мощению
<b>Зона зимостойкости</b>	6а (-23,3 до -20,6 °C)
<b>Устойчивость к ветру</b>	moderate to poor
<b>Прочие виды устойчивости</b>	устойчив к морозам, зона 1 - 6
<b>Применение</b>	узкие улицы, кашпо для деревьев, небольшие сады, сады в патио
<b>Форма</b>	штамбовое дерево, многоствольное дерево
<b>Происхождение</b>	Répinières Masson, France, ± 1850
<b>Синонимы</b>	Catalpa bungei HORT

A densely branched, spherical shrub, that when grafted on stock (C. bignonioides), can grow into a small, flat-topped, spherical tree. Depending on the graft union the height will be 2 - 2.5 m. The crown becomes circa 6 - 7 m wide. It is a slow growing tree. The grey brown, shallow fissured bark peels in plates and the hard wood of the twigs breaks easily. The acuminate and entire, heart-shaped leaf appears late in spring and is shed relatively early. It is considerably smaller and narrower than the species. When bruised a distinct smell is emitted. In autumn it turns yellow. Shallow rooting with fleshy roots. The tree can be pruned vigorously every few years to encourage the crown. Widely applied in small gardens, on squares and round-abouts.
