

## Celtis bungeana

Высота	10 – 15 m
Ширина	10-12m
Крона	round/spherical, half-open crown
Кора и ветви	twigs green, bark light grey, smooth
Лист	ovate to elongated, 4-9 cm long, glossy dark green
Осенний окрас	желтый
Цветы	inconspicuous, yellow-green, April
Плоды	drupe, 7 mm, black
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	clayed soil, loamy soil, sandy soil
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	5 (-28,8 до -23,4 °C)
Устойчивость к ветру	good
Прочие виды устойчивости	устойчив к морозам, зона 1 - 6, сустойчив к ветру
Дерево-среда обитания для животных	устойчив к морозам, зона 1 - 6, сустойчив к ветру, притягивает бабочек
Применение	аллеи и широкие улицы, промышленные зоны
Форма	штамбовое дерево

The medium to large *Celtis bungeana* forms a round crown. Later in life, the crown will sag more, becoming more flattened and broadly vase-shaped. The young twigs are green, the old bark is light grey and smooth. Most striking about this species are the shiny dark green leaves, which give the tree a vital appearance. The leaves have three main veins, which are most clearly visible on the underside of the leaf. The leaf margin is smooth, at most with a few small teeth near the apex. Flowering is inconspicuous, but does attract bees. The flowers are followed by small black fruits.

This *Celtis* prefers to grow on loamy soil. Tolerates drought and air pollution, making it a good future tree.
