

Celtis sinensis

Высота	15 - 20 m
Ширина	10-15m
Крона	umbel-shaped to round, half-open crown
Кора и ветви	twigs (reddish) brown, bark grey, smooth
Лист	elliptical to ovate, 3 - 10 cm, tip pointed or tapering
Цветы	green, inconspicuous, April/May
Плоды	round drupe, green to orange-red or black, 0.5 - 1 cm, single or in clusters of up to three
Колючки/шипы	None
Ядовитость	неядовитый, обычно
Вид почвы	well drained soil, tolerates drought
Влажность почвы	устойчив к сухим почвам
Мощение	устойчив к мощению
Зона зимостойкости	7a (-17,7 до -15,0 °C)
Устойчивость к ветру	slightly susceptible
Применение	промышленные зоны
Форма	штамбовое дерево
Происхождение	Eastern China, Korea, Japan, Taiwan

Unremarkable large tree with a semi-open, umbel-shaped to round crown. As with many *Celtis* varieties, the first-year twigs can be strikingly long. They are brown to reddish brown, sometimes a little hairy. The older bark is smooth and grey. The leaves feel somewhat papery: the margin is toothed/serrated from the middle to the tip. The inconspicuous flower clusters are followed by red drupes. These can vary in colour from green to orange-red or black. Like many *Celtis* varieties, it is a warmth-loving plant that grows noticeably faster in a warm, dry environment than in a cold, wet climate. Prefers well-drained soil. Can tolerate drought and air pollution.
